

**BLUEBONNET**  
EYE CARE

# ROUTINE EYE EXAMS

**ZACH FAUST, OD**

Routine Eye Exams sometimes do not detect many eye problems in their early stages. In order to diagnose and treat these diseases early and allow aggressive treatment to prevent vision loss, we have begun to use these diagnostic instruments for patients who have a family history of eye diseases such as pituitary tumors, glaucoma, retinal and macular degeneration, optic nerve disease, retinal disturbances due to vascular problems and medications.

We strongly recommend these additional tests for those patients who have a family history of any of the above or suffer from high blood pressure, Diabetes, headaches, migraines, floaters, or have a high spectacle prescription.

These tests are optional and require an additional few minutes to administer. There's also a nominal fee for the procedure.

- I would Like a visual Field analysis for my chart to record the health and efficacy of my visual field. I understand that there is a \$35 charge for the service.
- I would like a 3D laser scan of my macula and optic nerve to check for early signs of my eye problems. I understand there is a \$40 Charge for the service.
- I Decline these services

*Please note while these are "optional" for some people, It represent present preventive health care for others. it may "rule out" certain eye diseases. In the later case, you may be able to submit these charges to your major medical insurance for reimbursement. Another more comprehensive level of testing may be billed at a higher rate.*
